Sogo freebsd installation guide 2020 full

MySQL databases are also located in /var/db/mysql/ Pages 1 You must login or register to post a reply 1 Topic by GerryM 2021-04-03 07:53:41 ==== REQUIRED BASIC INFO OF YOUR IREDMAIL SERVER ====- iRedMail version (check /etc/iredmail-release): 1.3.2 MARIADB edition- Deployed with iRedMail Easy or the downloadable installer? Preparations Open a terminal and log on to the FreeBSD system as root. If browsing directly on the server: If browsing from a remote system: http:// or http:// (if configured)You will see the Joomla Web Installer page. nice catch. didn't see that as a troubleshooting option.@GerryM: I commented out lines 405, 406 and 407:#metric imap_command_finished {#   event_name = imap_command_finished#}Issued "service dovecot start" and was able to get logged into Roundcube on my fresh install with the postmaster account.Still dont know why it is horked up to the point that Dovecot will not start.John 5 Reply by iredmail.mb 2021-04-05 05:34:17 I'm in the middle of a fresh freeBSD 12 install as well and i'm getting the same error:the full error i get is:doveconf: Fatal: Error in configuration file /usr/local/etc/dovecot/dovecot.conf line 405: Unknown setting: metric { event_namedoveconf: Error: managesieve-login: dump-capability process returned 89doveconf: Fatal: Error in configuration file /usr/local/etc/dovecot/dovecot.conf line 405: Unknown setting: metric { event_name==Error==Configuration file check failed.# 2.3.13 (89f716dc2): /usr/local/etc/dovecot/dovecot.conf# Pigeonhole version 0.5.13 (cdd19fe3)doveconf: Fatal: Error in configuration file /usr/local/etc/dovecot/dovecot.conf line 405: Unknown setting: metric { event_namedoveconf: Error: managesieve-login: dump-capability process returned 89doveconf: Fatal: Error in configuration file /usr/local/etc/dovecot/dovecot.conf line 405: Unknown setting: metric { event_nameI will try commenting it out as well, but, checking on past installations, that line (405) was present on prior versions of dovecot without raising any issue, i wonder if it is some kind of problem recently introduced in dovecot (and hopefully soon fixed!) 6 Reply by iredmail.mb 2021-04-05 05:35:54 Oh, and about sogo, by replacing sogo4 with just 'sogo' in the iredmail installation files, the installation succeeds and installs sogo 5.x 7 Reply by iredmail.mb 2021-04-05 21:21:27 More on SOGo 5.x and Freebsd, i was able to install it, it starts and it listen to port 20000, but it responds with a 501 error code to any request.Not sure what to do...2021-04-05 08:55:08.544 sogod[92156:101064] EXCEPTION: NAME:NSInvalidArgumentException REASON:Tried to add nil value for key 'users' to dictionary INFO:{}Apr 05 08:55:08 sogod [92156]: xxx.xxx.xxx.xxx "GET /SOGo/dav/address@domain.dom HTTP/1.0" 501 0/0 0.001 - - -2021-04-05 09:11:58.272 sogod[92156:101064] EXCEPTION: NAME:NSInvalidArgumentException REASON:Tried to add nil value for key 'users' to dictionary INFO:{}Apr 05 09:11:58 sogod [92156]: xxx.xxx.xxx.xxx "PROPFIND /SOGo/dav/address@domain.dom HTTP/1.0" 501 0/127 0.001 - - -I'm not sure if the "EXCEPTION: NAME ..." has anything to do with the issue. 11 Reply by ZhangHuangbin 2021-04-13 16:50:09 12 Reply by wombelix 2021-12-23 19:36:17 iredmail.mb wrote:2021-04-05 08:55:08.544 sogod[92156:101064] EXCEPTION: NAME:NSInvalidArgumentException REASON:Tried to add nil value for key 'users' to dictionary INFO:{}Apr 05 09:11:58 sogod [92156]: xxx.xxx.xxx.xxx "PROPFIND /SOGo/dav/address@domain.dom HTTP/1.0" 501 0/127 0.001 - - -Did you found a Solution? root@localhost [(none)]>create database joomla; Create a dedicated MySQL user with your preferred username and password. In step 2 Database: Username: Password: Database name: Leave the other settings unchanged: Database Type: MySQLi Hostname: localhost Table Prefix: unchanged The final step of the web installer will be to delete the installation folder. Pages 1 You must login or register to post a reply Downloaded installer- Linux/BSD distribution name and version: FreeBSD 12.2- Store mail accounts in which backend (LDAP/MySQL/PGSQL): MariaDB- Web server (Apache or Nginx): Nginx- Manage mail accounts with iRedAdmin-Pro? More details provided in previous section: Installing Required PHP Extensions. 10 Reply by GerryM 2021-04-10 14:20:29 Waiting for 1.4.0! In the mean time, installed iRedMail-master per another thread. Currently use RoundCube, but wanted to try SOGo since documentation says both may be installed.Install stops with: Port directory /usr/ports/www/sogo4 doesn't exist.I checked my ports tree, and there are only sogo and sogo2. Significant compilation time can optionally be saved by first installing mysql80-client via pkg prior to compiling php80-mysqli:pkg install mysql80-client Compile and reinstall php80-mysqli: make -C /usr/ports/databases/php80-mysqli/ reinstall clean -DBATCH Configuring PHP Create a new php.ini file by copying one of the sample files. unzip Joomla_*.zip -d /usr/local/www/apache24/data/ Change ownership of the data directory and everything in it to 'www' thus allowing the Joomla! configuration script to write into this directory. Deutsch • English • français This article is a guide detailing how to install Joomla! Content Management System on a FreeBSD based system. pkg install mysql80-server or make -C /usr/ports/databases/mysql80-server/ install clean -DBATCH Add the following line to /etc/rc.conf: NOTE: MySQL 8 server initially defaults to creating users using authentication. service apache24 restart Apache's error log is located at /var/log/httpd-error.log MySQL log files are located in /var/db/mysql/ and are named .err and -slow.log by default. chown -R www /usr/local/www/apache24/data/ At this point you should be able to begin installing and configuring Joomla! Open and direct your web browser to one of the following... No- [IMPORTANT] Related original log or error message is required if you're experiencing an issue.====Time to refresh my server after 5 years. pkg install php80 or make -C /usr/ports/lang/php80 install clean -DBATCH Also install Apache PHP module mod_php80. Once that is done you can browse to your newly installed Joomla! web site! Post Installation Research how to optimally configure and harden the security of your Joomla! FAMP web server! Troubleshooting Configuration changes made to either apache's httpd.conf or PHP's php.ini will require that the apache service be restarted for the changes to take effect. mysql -u root root@localhost [(none)]>ALTER USER 'root'@'%' IDENTIFIED BY 'password'; Create a database for the Joomla web site with your preferred database name. DEFAULT_VERSIONS+= php=8.0 python=3.9 python3=3.9 perl5=5.32 mysql=8.0 Installing Apache Web Server Execute the following command to install apache24 as your webserver. Installed latest stable FreeBSD 12.2 on my test server. If you intend to compile the ports from sources then ensure the file /etc/make.conf exists and contains DEFAULT_VERSIONS that reflect the versions you intend to install on the system. service apache24 restart Installing MySQL Database Server Execute the following commands to install MySQL 8.0 server. Installing Joomla! CMS Download the Joomla installation package ending with .zip Unzip the file to apache's data directory. I'm facing the exact same issue on FreeBSD 13 with iRedMail 1.4.2 and sogo 5.4.0 13 Reply by ZhangHuangbin 2021-12-23 20:00:44 wombelix wrote:Did you found a Solution? Joomla will connect to it's database using a user with a if the php80-mysqli extension is configured and compiled from source. I'm facing the exact same issue on FreeBSD 13 with iRedMail 1.4.2 and sogo 5.4.0Please create a new forum topic and clearly explain your issue, with detailed and related log pasted for troubleshooting. This guide details installation of the following application versions of the FAMP stack: FreeBSD 13.0 Apache 2.4 MySQL 8.0 PHP 8.0 Joomla! 3.9.x NOTE: Intended as a quick-start installation guide, this article does not address optimal security settings, performance tuning, etc. 2 Reply by ZhangHuangbin 2021-04-03 17:31:23 - The port name(s) changed after iRedMail-1.3.2 release, that's why it failed.- The latest development edition uses the correct port name(s). If you prefer to use authentication,edit /usr/local/etc/mysql/my.cnf and add the following line to the [mysqld] section: default_authentication_plugin = mysql_native_password Start the MySQL server. pkg install mod_php80 or make -C /usr/ports/lang/php80 install clean -DBATCH As instructed by the post-install message, add the following lines to /usr/local/etc/apache24/httpd.conf: SetHandler application/x-httpd-php SetHandler application/x-httpd-php-source Also modify the following line: DirectoryIndex index.html changing it to: DirectoryIndex index.php index.html Installing Required PHP Extensions Joomla requires the following PHP extensions: CURL MYSQLI SESSION SIMPLEXML XML XMLREADER ZIP ZLIB To install the required extensions via pkg: pkg install php80-curl php80-mysqli php80-session php80-simplexml php80-xml php80-xmlreader php80-zip php80-zlib To simplify installation from sources, the php80-extensions meta-port can be used: make -C /usr/ports/lang/php80-extensions/ config select the required extensions and deselect all others then: make -C /usr/ports/lang/php80-extensions/ install clean -DBATCH Optimally to configure the php80-mysqli extension to use MySQL 8.0 server's default authentication mechanism instead of the php80-mysqli package default authentication: make -C /usr/ports/databases/php80-mysqli/ config deselect 'Use MySQL Native Driver' NOTE: When configured this way, the php80-mysqli port will depend on mysql80-client, which will also be installed. service apache24 start Installing PHP The following commands will install PHP 8.0 to your system. service mysql-server start Upon initial installation, the MySQL 8.0 server's root user has no password. Traceback (most recent call last): File "/usr/local/www/iredadmin/tools/delete_mailboxes.py", line 43, in   import webModuleNotFoundError: No module namedInternal Server Error'web'I suspect this is why iRedAdmin returns: Internal Server ErrorDoing a search suggests to run: pip3 install web.pybut result in- pip3: Command not found.How to install the missing web.py on FreeBSD? Login to the mysql server on the command line as root and set your desired password. stay tuned. 9 Reply by ZhangHuangbin 2021-04-06 21:01:45 iredmail.mb wrote:More on SOGo 5.x and Freebsd, i was able to install it, it starts and it listen to port 20000, but it responds with a 501 error code to any request.Finished fresh iRedMail (development edition) installation with latest ports tree, SOGo (5.0.1_1) works fine for me. root@localhost [(none)]>grant all privileges on joomla.* to 'joomla'@'%'; root@localhost [(none)]>flush privileges; exit to close the connection to MySQL server. Looking at distinfo for sogo shows that this is SOGo-5.0.1. To finish the install, I edited the config file and changed: export USE_SOGO='NO'Thanks! ---- Spider Email Archiver: On-Premises, lightweight email archiving software developed by iRedMail team. 8 Reply by ZhangHuangbin 2021-04-06 18:42:16 GerryM wrote:doveconf: Fatal: Error in configuration file /usr/local/etc/dovecot/dovecot.conf line 405: Unknown setting: metric { event_nameYou can simply remove or comment out this "metric {}" block.@iredmail.mb i'm trying to reproduce this issue with a new fresh installation. In step 1 Configuration: fill in the fields as required. reinstalled and got the dovecot issue.@Zhang: sogo4 port names error ... If you will be installing the required ports using pkg then skip to the next section to begin the installation. But now I get 3 hourly emails about web.py missing. You can try development edition for testing, and we're going to announce new version (1.4.0) next week (if everything goes well). 3 Reply by GerryM 2021-04-04 02:41:14 (edited by GerryM 2021-04-04 02:58:05) Thank you, I'll try that later.I also have a Dovecot issue with this install:doveconf: Error: managesieve-login: dump-capability process returned 89doveconf: Fatal: Error in configuration file /usr/local/etc/dovecot/dovecot.conf line 405: Unknown setting: metric { event_name 4 Reply by john.blue 2021-04-04 06:52:16 (edited by john.blue 2021-04-04 06:55:37) GerryM wrote:I also have a Dovecot issue with this install:doveconf: Error: managesieve-login: dump-capability process returned 89doveconf: Fatal: Error in configuration file /usr/local/etc/dovecot/dovecot.conf line 405: Unknown setting: metric { event_nameSo I came here to report *exactly* both issues on BSD 12.2 as well. lol. I too needed to refresh and wanted to try out the sogo4 option. Since it bombed .. cd /usr/local/etc/ cp php.ini-production php.ini Open and edit /usr/local/etc/php.ini and adjust the following values: output_buffering = Off post_max_size = 20M upload_tmp_dir = /usr/local/www/apache24/data/tmp/ upload_max_filesize = 20M After installing and configuring PHP restart the Apache service. pkg install apache24 or make -C /usr/ports/www/apache24/ install clean -DBATCH Add the following lines to /etc/rc.conf: apache24_enable="YES" apache24_http_accept_enable="YES" Start the apache server. root@localhost [(none)]>create user 'joomla'@'%' identified by 'password'; Grant the user all privileges to the Joomla database.
